                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, whycobacterium by determining the nuclection that complete sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 155! (Ar199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of the tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  987

The invention realtes to a novel method of detecting Mycobacterium tuberculosis. The method comprises amplifying the DNA in the samples to generate a detectable amount of amplified DNA comprising a catalase.

Generate a detectable amount of amplified DNA comprising a catalase peroxide (katg) DNA fragment with sequence of bases 904-1523 of the M. tuberculosis strain H37Rv MC katG gene sequence. The method optionally turberculosis strain H37Rv MC katG gene sequence. The method optionally threonine mutation in codon 315 (33157 mutation), indicative of an isonicotinic acid hydrazide (INH)-resistant M. tuberculosis strain. The method can be used to detect M. tuberculosis in biological fluids, especially human sputum, useful to diagnose tuberculosis. This disease is a major cause of human morbidity and mortality, and conclusive diagnosis and subsequent treatment depends on identification of the ethologic agent M. tuberculosis. INH has been used in tuberculosis treatment, but INH-resistant strains have emerged; the method allows such druy-resistant strains to be identified. The present sequence represents the M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         987
                                                                                                                                                                                                                                                                                                                                                                                      This partial DNA sequence encodes the katG gene from a variant strain of Mycobacterium tuberculosis H37Rv which is used in a novel method to rapidly identify strains of M. tuberculosis which are resistant to isoniazid (INH, also known as isonicotinic acid hydrazide). The method involves the use of restriction fragment length polymorphism (RFLP) analysis to determine if a Ncir-MspI restriction site is absent in the DNA of the strain at the codon corresponding to codon 463 of a M. tuberculosis katG gene consensus sequence (see AAW31343). The absence of the site indicates an INH-resistant strain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        536 GAIGGGCITCAAGACGITCGGCITCGG--GCGTCGACCAGIGGGAGACCGAIGA

The sequence contains one open reading frame with high coding probability; a 735 amino acid protein is encoded by the ORF having predicted mol.w. 80029. This protein conforms to the structure of known bacterial catalase-peroxidases which consist of two modules (possibly the result of a duplication

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is of the Alcaligenes aquamarinus catalase-64CA2 gene. Fragments of the gene can be used to identify related sequences. Catalase-64CA2 may be used to catalyse oxidation relations such as epoxidation or hydroxylation. The enzyme can also be used to detect or destroy hydrogen peroxide, e.g. in connection with glyoxylic acid production, biosensors, contact lens cleaning, pulp/paper bleaching and pasteurisation of dairy products. Antibodies raised against catalase-64CA2 can be used to screen libraries for detection and purification of cells containing the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATTATGGTCATTATGGTCCTTTCTTTATTCGTATGGCTTGGCAGGTGCCGGAACATACA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1275 TCACGTATGGCCATGGATGATGAGGAGACTGTGGCCCTGATCGCGGGAGGGCATACATTT 1334
                                                                                                                                                                       The present sequence is that of the Mycobacterium tuberculosis katG (isoniazid resistance) gene (bp66-1320). Amplification and cycle sequencing primers (see AAAA9823-62) are used for the detection and analysis of antibiotic resistance-associated mutations in defined regions of rpoB (rifampin), katG (isoniazid), oxyR-aphC PR (isoniazid), mabA (isoniazid), proA (promycin), 165/rrs (streptomycin), embB (ethambutol), pncA (pyrazinamide), gyrA (ciprofiloxacin) and 233 (azithromycin) genes of M. tuberculosis. These primers can be used in a method for the detection and characterization of M. tuberculosis present in a sputum sample. The method involves performing a sequencing procedure, with or without prior amplification, to detect the presence of M. tuberculosis, and if present to evaluate the rpoB katG, rpsL/sl2 and 235 genes for the presence of antibiotic-inducing mutations. If M. tuberculosis is detected, a second sequencing procedure is performed on the sample to evaluate additional genes for the presence of antibiotic resistance-inducing mutations. Genotypic tests are rapid, sensitive and accurate providing information as to antibiotic treatment options.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1335 GGTAAAGCACATGGTGCAGCGTCTCCTGAAAATGTATTGGCGCAGGGCCTGATGGTGCA 1394

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be discovered, possible functions of unknown open reading frames can be contored. The expression of genes can be used to study how FF cells and pene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore on propagenesis, recombination, metabolic or catabolic or taponic or random cDNA clones including elimination of redundancy as one spot on an organisaris one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11857 represents ESTS from Aspergillus niger: AAF18679 represents ESTS from Aspergillus organisation in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GTGCACCTGTGGAGGAGCAGGGACTGGGAAAAATAAATGTGGTACAGGAAACGCA 1449

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a moilf 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calcutated. The method is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the centrain nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting multations or single nucleotide polymorphisms (SNR's); and (11) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABO13410-ABO54121 represent genomic DNR sequences used to illustrate the method for determining the degree of cytosine methylation described in

cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the remember of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation of cell or tissue cypes and for investigating cell differentiation. The method allows the method for determining the degree of cytosine methylation described in the disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                              The present invention relates to oligonucleotides based on nucleotide sequences obtained from both wild-type tubercle bacilli (wtTB) that are susceptible to a drug and mutant-type tubercle bacilli (mtTB) that are resistant to a drug and mutant-type tubercle bacilli (mtTB) that are resistant to a drug. The drugs used in the present invention are rifampicin (RFP), streptomycin (SM), kanamycin (KM), isoniazid (INH) and the mubber of EB). The present is responsible for resistance to RFF; the responsible for resistance to SM, the inhA gene is responsible for resistance to INH; resistance to SM, the inhA gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; invention also relates to nucleic acid probes having part of a nucleotide sequence of tubercle bacilli (TB) responsible for drug resistance and primers used to generate the probes. The present sequence is an origination can be used to enable the differentiation of drug resistance and the determination of infection with tubercle bacilli

The present invention relates to oligonucleotides based on nucleotide sequences obtained from both wild-type tubercle bacilli (wtTB) that are susceptible to a drug and mutant-type tubercle bacilli (mtTB) that are resistant to a drug and mutant-type tubercle bacilli (mtTB) that are resistant to a drug. The drugs used in the present invention are rifampicin (RFP), streptomycin (SM), kananycin (KM), isoniazid (INH) and thambutol (EB). The rpoB gene is responsible for resistance to RPP; the rs gene is responsible for resistance to SM; the linh gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; cand the embB gene is responsible for resistance to INH; invention also relates to nucleic acid probes having part of a nucleotide sequence of tubercle bacilli (TB) responsible for drug resistance and primers used to generate the probes. The present sequence is an prigonucleotide of the present invention. The oligonucleotides of the present invention can be used to enable the differentiation of drug resistance and the determination of infection with tubercle bacilli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1022 GACTGGTAATGTTGCCCTTGAATCCATGGGATTTAAAACGCTGGGATTTGCTGGCGGAAG 1081

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invariant states to originate clauses make on universective sequences obtained from both wild type tubercle bacilli (wtTB) that are susceptible to a drug and mutant-type tubercle bacilli (wtTB) that are susceptible to a drug. The drugs used in the present invention are rifamptoin (RPP), streptomycin (SM), kanamycin (KM), isoniazid (INH) and ethambutol (EB). The rpoB gene is responsible for resistance to SM and KM; the rpsL gene is responsible for resistance to SM; the inhA gene is responsible for resistance to SM; the inhA gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; and the embB gene is responsible for resistance to INH; and the embB gene is responsible for resistance and invention also relates to nucleic acid probes having part of a nucleotide sequence of tubercle bacilli (TB) responsible for drug resistance and colligonucleotide of the present invention can be used to enable the differentiation of drug resistance and the determination of infection with tubercle bacilli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               733 TGGATATGGAGGCTCTGAAAAAAATATCAAAGATTTGCTGACAACTTCCCAGGATTGGT 792

cc This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cc cytosine (c) but not methylated c, to uracil, then part of the genomic DNA that contains the target c is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one cmember, of oligomets the mad/or peptide-nucled: acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two cc classes of oligomers the degree of methylation is calculated. The method is used: (i) for diagnosis and/or progness; of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (il) for differentiation of call or tissue contypes and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Ampliation status of many C residues to be determined simultaneously. The disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1254 AAAGATATCAGGGAAGCTTTTTCACGTATGGCCATGGATGAGGAGACTGTGGCCCTG 1313

The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic DNR that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the method is used: (1) for diagnosis and/or prognosis of side effects of the method plymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

Method for determining the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism;
Oligonucleotide for detecting cytosine methylation SEQ ID NO 9828
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 538 BP; 238 A; 142 C; 47 G; 111 T; 0 other;

The present invention relates to oligonucleotides based on nucleotide sequences obtained from both wild-type tubercle bacilli (wtTB) that are susceptible to a drug and mutant-type tubercle bacilli (wtTB) that are resistant to a drug and mutant-type tubercle bacilli (wtTB) that are resistant to a drug and mutant-type tubercle bacilli (wtTB) that are resistant to a drug. The drugs used in the present invention are resistant (EM), streptomycin (SM), kanamycin (KM), isoniazid (INH) and thambutol (EB). The rpoB gene is responsible for resistance to SRP; the responsible for resistance to SM; the inhA gene is responsible for resistance to INH; the katd gene is responsible for resistance to INH; can the embB gene is responsible for resistance to EB. The present invention also relates to nucleic acid probes having part of a nucleotide sequence of tubercle bacilli (TB) responsible for drug resistance and primers used to generate the probes. The present sequence is an oligonucleotide of the present invention. The oligonucleotides of the present invention be used to enable the differentiation of drug

The method uses fluorescence-labeled nucleic acids isolated from the Fr cells and a substrate of expressed sequence tags (EST). The ESTS are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microcorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be

adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway morphogenesis, recombination, metabolic or catabolic pathway engineering using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on a array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF01478 to AAF11247 represents ESTs from Aspergillus niger; AAF11861 to AAF118678 represents ESTs from Aspergillus oryzae; and AAF18679 to AAF118678 represents ESTs from Aspergillus oryzae; and all specifically claimed in the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                              This sequence comprises a genomic clone of the tomato fruit expressed proline-rich protein gene TPRP-F1, including the promoter region. A claimed method for the production of genetic parthenocarpy in plants comprises: providing a cassette including DNA coding for modulation of auxin effects in plants and a promoter specific for the ovary between anthesis and early fruit development, and introducing the cassette into a plant. Suitable promoters include the TPRP-F1 promoter and an alternative TPRP-F1 promoter see AATB9279) that confers ovary and developing embryo specificity. The method allows parthenocarpy to be induced in especially tomato plants without the need to apply (synthetic)
           Producing genetic parthenocarpy in plants - with sequence encoding auxin modulator controlled by promoter specific for the ovary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Drosophila melanogaster expressed polynucleotide SEQ ID NO 20621.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions .
                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila melanogaster expressed polynucleotide SEQ ID NO 20447

Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of blosynthetic products, e.g. enzymes. Borrelia belongs to a family of mottle, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                          New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease

                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention 1 useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

cells. The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be discovered, possible functions of unknown open reading frames can be discovered, the expression of genes can be used to study how FF cells and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway complementing. Using ESTS provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an increarrays based on function of the gene products to facilitate analysis of the results. AAF01478 to AAF11877 represents ESTS from Aspergillus oryzae; and pressit, which are all and an are the conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  106

AAH55304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to raise antibodies against the bacteria. The polypeptides may also be used to casay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA parences the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present for SEQ ID NO:4455 to 4464.

ANH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis.

(II) and (II) can have antibacterial activity and therefore can be used.

(I) and (II) can have antibacterial activity and therefore can be used.

(I) and (II) can have antibacterial activity and therefore can be used.

(I) and (II) can be used to produce the produce the state of the polypeptides (II) via the production of vectors.

(I) and them which are used to produce hosts cells which express the polypeptides way also be used to raise antibodies against the bacteria.

(I) and therefore acids in a constant the bacteria.

(I) and therefore acids in the constant is antibodies against the bacteria.

(I) and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymucleotide sequences and primers which are used in the exemplification of the present invention. AAH55091 to AAH55098 represent oil gonucleotide sequences and primers which are used in the exemplification of the present invention.

(I) The prosent invention specifically claims all the polymucleotide sequence listing of the present specification, however the sequence listing of the present specification, however the sequence listing of the present specification.

(I) though sequence listing only goes up to SEQ ID NO:4455 to 4772, and the present specification are not accompanies and primers for SEQ ID NO:4455 to 4772, and the present specification are not accompanies and primers and primers and primers are specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   597 GCTGTAGCCGCTGATAAAAAAGAGACTCAAAATTTCTACTATCCAGAAACACTGGATTTA 656

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AsS64197 AsS6445 represent novel human when the polypeptide and polymetion in an invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAAAAAATACGGCTCCAGTATTTCCTGGGGAGACCTGATGGTCCTGACTGGTAATGTTGC 1036

                                                                                                                                                                                                                              qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome configurate chain reaction (PCR) primers, oligomers, and for chromosome configurate chain reaction (PCR) primers, oligomers, and for chromosome configuration applies, and in recombinant production of (II). The polypeptide in recombinant production of (II) the useful for genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disporders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in the configuration of mutations and polyneral protein and polyneration of mutations and polyneration of the primary of the polyneration of mutations and polyneration of the polyneration of the polyneration of mutations and polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the polyneration of the pol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1411 CTTCCGTGGTGGCGACAAACGCGGTGGTGCCAACGGTGCGCGTCTGGCATTAATGCCGCA 1352

aniho acid sequences given in AMM81210 to AAM891921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own produce the secreted (I), by inserting polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK44942 to AAK87694 represent invention. AAK44942 to AAK87595 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               528 GCTATTCGTATGATAAAAAACTCTTCCTGTTCTGATTCTTCTGGCGCTATCGGGGAGC 587

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid comprising a sequence of at least bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as oligonuclectides and/or PNA-oligomers for detecting cytosine methylations, as well as method which is particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABL/0111-ABL/0626 represent chemically pre-treated genomic DNA's of genes associated with cell signalling.

Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 445 TAICTAICCCAGCAATAGGIAIATCCIGIIGCAICAATAAAGIIGACIITIGIAIACAAC 504

The invention relates to 224 nucleic acid sequences comprising at least 18 bases of a chemically pretreated gene associated with gene regulation selected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the chemical pretreatment converts cytosine bases unmethylated at the chemical pretreatment converts cytosine bases unmethylated at the chemical pretreatment converts cytosine bases unmethylations. Consistent of the cytosine, to enable analysis of cytosine methylations. The DNA sequences, oligomers (or sets/Arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, conditing analysis of the cytosine methylation patterns of such diseases, and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen syndrome, renal disease, cardiac disorders, patching in the sequence data for this specification and is sequence included in the sequence data for this specification and is associated with the human gene regulation-associated genes.

Conce: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form that directly from WIPPO at the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene regulation-associated gene; severe combined immunodeficiency;
                                      cardiac damage; inflammatory response; Haemophilia; Werner syndrome; asthma; HDR syndrome; congenital heart defect; Saethre-Chotzen syndrome; renal disease; Preeclampsia; cardiac allograft vascular disease; oclorectal cancer; thyroid cancer; oesophageal cancer; ds; tumour; immunostimulant; cardiant; antiinflammatory; coaquiant; antiasthmatic; nephrotropic; gynecological; anti-tumour; immunosuppressive; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid sequences from chemically modified genes associated with gene regulation, useful for analysing cytosine methylations for diagnosis and therapy of diseases e.g. severe combined immunodeficiency

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to chemically modified DNA sequences of signal transduction associated genes. The DNA sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligonucleotides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, e.g. cell lines, blopsies, blood, sputum, stool, urine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK1158-ABK11545 represent chemically pretreated genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; signal transduction associated gene; cytosine methylation state; CpG island; signal transduction associated disease; solid tumour; cancer; antitumour; cytostatic; mutant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          445 TATCTATCCCAGCAATAGGTATATCCTGTTGCATCAATAAAGTTGACTTTTGTATACAAC 504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequences of different genes associated with signal transduction, or their complementary sequences.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genomic sequences of genes associated with signal transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                   Signal transduction associated gene modified complementary DNA #100.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This invention describes novel human nucleic acid (cDNA) sequences (A), that are highly expressed in uterine tumour tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (11) to isolate complete genes. (B) are used (1) to identify agents suitable for treatment of uterine or anometrial cancer; (ii) directly for treating these forms of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly inder fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent frequency of occurrence in a particular tissue. AAA41981-242121 represent EST fragments derived from a human endometrium tumour cDNA 11brary which encode the protein sequences represented in AAY59941-Y60328.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        534 TGGTGATCAAATTAACCTTCAGGTCCTTTCTCCTCCTGGAAAGCACTCTACTGCTTCAA 475

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell cancerous, where the gene product is encoded by one of the 5248 polynuclectide sequences given in AAZ12532 to AAZ1779. The polynuclectides can be used as a source of primers and probes, which can be used for availety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer. The polynucleotides can also be used to screen for and lung cancer. The polynucleotides can also be used to screen for

```
The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are ischerichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aerupinosa and Enterococcus faecalis. The pneumoniae, Pseudomonas aerupinosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for for antibiotic acids which are required for cell proliferation in a wide variety of organisms. The present sequence is an antisense

                                                                                                                                                                                                                                                                                                  g
                                                                                            ö
                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Entercoccus faccalis. The invention is also useful for the identification of potential new targets

for antiblotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antiblotics, the essential genes themselves and the discovery of novel antiblotics, the essential genes themselves and the discovery of novel antiblotics, the essential genes themselves and the discovery of novel antiblotic and seed and Entercoccus faecalis. The prention is also useful for the identification of potential new targets for antiblotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to soreen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part for the printed specification, but was obtained in electronic format directly from WIPO at the printed protablished_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "these bases represent a line of missing text in
the sequence listing in the specification. They
are included to maintain the nucleotide numbering
given in the specification for this DNA sequence"

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are itself to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The CC polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including calvillitis, eyelld infections, food poisoning, osteomyelitis, synfrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences of any of the S.aureus DNA sequences con tisolating computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                       polynuclectides) or a host cell transformed with the vector, an anti-98P7C3 antibody, an non-human transgenic animal expressing a anti-98P7C3 antibody, an non-human transgenic animal expressing a superior of special mainly an anti-98P7C3 protein or polynuclectides in a biological sample, monitoring the presence of cancer in an individual by detecting an elevated level of the 98P7C3 protein or polynuclectides and a pharmaceutical composition comprising a modulator of 98P7C3. 98P7C3 protein, or T cell/B cell epitopes derived from it, are useful in inducing an immune response (in mammal) to a 98P7C3 protein. Upon contact with a cytotoxic T cell (CTL) the immunogens induce the CTL (with its helper T cell) to kill an autologous cell expressing 98P7C3. The immunogen may be a nucleic acid encoding the protein or epitope. The antibody is useful for delivering a cytotoxic agent to a cell that expresses 98P7C3, by conjugating the cytotoxic agent to the antibody or its fragment that specifically binds to a 98P7C3 epitope, and exposing the cell to the antibody-agent conjugate. The modulator is useful for treating a patient with a cancer that expresses 98P7C3 epitope, the suseful for reacting a patient with a cancer, lung cancer, breast cancer, uterine cancer, cervical cancer, rectal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel foetal polypeptides encoded by polypuclectides comprising one of 477 sequences fully defined in the specification. The foetal polynuclectides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence is a full length cDNA which was assembled using expressed sequence tags (ESTs) found to be expressed in human foetal tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel foetal polypeptides encoded by polypucleotides comprising one of 477 sequences fully defined in the specification. The foetal polypucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence was assembled using an expressed sequence tag (EST) found to be expressed in human foetal tissue cDNA libraries as the seed.
                                                                                                      nervous system disorder; inflammation; expressed sequence tag; EST;

The invention relates to move a soluter prostact y quant related nuclear.

The invention relates to move a solute mon-bacterial prostatitis, chronic non-bacterial prostatitis, chronic non-bacterial prostatitis, chronic non-bacterial prostatitis, chronic non-bacterial prostatitis, prostatitis, chronic non-bacterial prostatitis, prostaticis of prostaticis acute bacterial prostatitis, prostaticis of prostaticis, granulomatous prostatitis, malacoplakia, benign prostatic nyterizophy or hyperplasia, and prostate neoplasic disorders, including adenocarcinomas, transitional cell carcinomas, ductal carcinomas, and squamous cell carcinomas, (1), (II) and antibody to (II) are useful for disorders in disorders (system disorders (paget's disease), autoimmune disorders (system clupus erythematosus, rheumatoid autoimmune disorders (system clupus erythematosus, rheumatoid carthritis), blood-related disorders (sickle cell anaemia), arthritis), blood-related disorders (sickle cell anaemia), comperioritis prostatis, musculoskeletal system disorders, neural activity and neurological disorders, uninary system disorders, neural activity and neurological disorders, inversal and disorders (all flammatory disorders (Alzheimer's disease and parkines), endocrine disorders (Alzheimer's disease) and patine disorders (solulary liver cirrhosis), condition and gali badder disorders disorders disorders disorders developmental and inherited disorders, disorders developmental and inherited disorders, disorders (page developmental and inherited disorders, disorders, disorders (page disorders) and wound healing and epithelial cell proliferation. (I) or (II) is useful to prevent skin aging, for preventing hair loss, to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        662 TCTGAGATTACACAGCCCTGAATCAAATCCCTGGGGGGCTGATTTTGATTATGCCACCAG 721
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; reproductive system related antigen; reproductive system disorder;
                                                                                                                                                                                                                                                                                                                                                             Novel isolated prostate gland related polypeptide useful for diagnosis and treatment of disorders of prostate such as prostatodystonia, prostatosis, prostatitis, benign prostatic hypertrophy and malacoplakia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel isolated prostate gland related nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

                                                                                    The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                      Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition

maize plants grown under selected conditions. The CDNA is obted used to study NR mRNA regulation in maize. The CDNA is obtd. using lambda gill as the cloning vector and a spinach NR cDNA as heterologous probe. The CDNA clone (PCIB808) is 66% homologous at the nucleotide level with the spinach NR gene, however the maize DNA has a high G/C content (66.5%) as compared to that of the spinach gene (46%) and is 75% homologous at the amino acid level.
                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human immune/haematopoletic antigen genomic sequence SEQ ID NO:20301

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 20301; 3071pp + Sequence Listing; English.

amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic acitivity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the propose and treat immune/haematopoletic-related diseases, especially cancers and cancer metastases of haematopoletic-drived cells. AAK64703 concers and cancer human immune/haematopoletic antigen genomic sequences from the present invention. AAK84942 to AAK87694 represent invention. AAK84942 to AAK87690 and AAM82169 sequences trom the present invention. AAK84942 to AAK87690 and AAM82169

The present sequence is specific to enterohemorrhagic Escherichia coliferior associated with the presence of virulence factors enterohemolysine (ehly) and intimin (eac). Nucleotides 237-570 also have 68% homology with the virK gene which codes for virulence proteins of Shigella flexneri. The present sequence is of plasmid origin. Fragments of the present sequence are used, as probes and primers, for detection of E. coli 0157:H7 and other enterohemorrhagic E. coli (EHEC), in human or animal samples, foods or the environment. The fragments are also useful for epidemiological studies. 181 GCCGTTATCTGTTGCATTTCCCCTTAGCCTGACTAGCCAGAGACACAATGATCTGTGCCG 240 301 AGCGTICCGGTCGGGATAAAAATCGCGCAGTGCGCCGGTCCATGCAGACACCCCCA 360 1 CTGCAGGAGATGGAAAAAAAGCCAAAATAAAAAATTGCCCATCCCAGCGCGCTCCAGCTG Gaps Nucleic acid sequence specific to enterohemorrhagic Escherichia coli. Mycobacterium tuberculosis.

US6294328-B1

tuberculosis; strain H37Rv; strain CDC 1551;

Mycobacterium tuberculosis strain H37Rv genome SEQ ID

AA199683;

NO 2.

```
Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence, pAN240, is a plasmid carrying the B. subtilis PanBCD operon which encodes three enzymes of the pantothenate biosynthetic pathway (PanB. C and D). Pantothenate, also known as vitamin B5; is used as a nutritional supplement in mammals and humans. The invention concerns methods of producing recombinant microorganisms overexpressing at least one B. subtilis pantothenate blosynthetic enzyme. The microorganisms and methods of producing them are useful for producing a pantothenate or pantoate, which is a nutritional requirement for livestock and humans. The methods are also useful for the identification of pantothenate kinase modulators. Panto-compounds are produced at a significantly higher yield than prior art methods and can be produced independent of the need to feed precursors which decreases expense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 335 GCCGGTCCATGCAGACACATCCCCCACGGGTAACAGCGTCCCTGTCACATTCTTCTGAAT 394

The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   392 AATGACATCAGGGATCCCGCCCGTCTCACTGGCGATAACGGGCACGCCGGAGACTGACGC 451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4403765 BP; 757105 A; 1447799 C; 1441301 G; 757371 T; 189 other;
                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2447433 GGCGTCGGCCACCCGGTCCACCGACCTACCGTCGACCACTAGCCCAGTCTTGTTGTTGTGCTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TICICIGGCGCTGCCTGCCATCATCCGGAAGCGTTCCGGTCGGGATAAAAATCGCGCAG 331
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 4411529 BP; 758565 A; 1449983 C; 1444602 G; 758379 T; 0 other;

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in other Bacillus cells; comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genewitzed from Bacillus cells to a substrate containing array of Bacillus celative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in which Bacillus cells adapt to changes in culture conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 351 ACATCCCCCACGGGTAACAGCGTCCCTGTCATCTTCTGAATGACATCAGGGATCCCG 410
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   411 CCCGTCTCACTGGCGATAACGGGCACGCCGGAGACTGACGCTTCAGCCAGTACCATACCA 470
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          follow up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Monitoring differential expression of several genes in first Bacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell relative to expression of same genes in one or more second
Bacillus cells, by using substrate containing Bacillus genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4.1%; Score 49; DB 24; Length 1135; 50.2%; Pred.                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a method of monitoring differential expression of genes in a first Bacillus cells, comprising hybridating labelled nucleic acid probes other Bacillus cells, comprising hybridating labelled nucleic acid probes cother Bacillus cells, comprising hybridating labelled nucleic acid probes cother bacillus cells to a substrate containing array of Bacillus cells as useful for measuring the expression of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring genes in dentifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes or other physiological provocation. Extensive convictions of several gaps in culture conditions, in which Bacillus cells adapt to changes in culture conditions, or which Bacillus cells adapt to changes in culture conditions, or which Bacillus cells adapt to changes in culture conditions, or environmental stress or other physiological provocation. Extensive equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tight from wippons to the method of the invention.

Once: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO
